VITARAISER

The characteristics of **VITARAISER** are that it contains an amazing amount of hydrogen, NMN, and the natural ingredient GSE, which inactivates viruses in the intestines and regulates intestinal bacteria, as the main ingredients. In addition, by adopting a vegetable cellulose capsule with excellent acid resistance that delivers these active ingredients to the intestines without being affected by stomach acid, sufficient hydrogen and NMN are quickly absorbed from the intestines into the blood and quickly distributed throughout the body. No matter how much other companies' conventional products claim to have antioxidant power, the effect is offset by stomach acid, so it is necessary to take a large amount of it. **VITARAISER** is made of 100% natural ingredients. So, there is no side effects to worry about.

VITARAISER frees you from high medical expenses, side effects and phytotoxicity caused by a large amount of routine drug use. Taking too much medicine can be detrimental to your health. Strong medicines can also damage organs. **VITARAISER** efficiently takes in hydrogen, which is the energy of the root of the great nature of the universe, into the body, and quickly heals and revitalizes diseased body tissues and damaged cells.

VITARAISER effectively and quickly spreads hydrogen, which has excellent antioxidant power, NMN which is effective for anti-aging, and GSE, a natural antibacterial ingredient that protects the body from viruses and bacteria, from the intestine to the whole body. **VITARAISER** is a true health supplement that goes beyond pharmaceuticals and promises many people a youthful and healthy future.

Hydrogen generation value of VITARAISER under simulated intestinal environment

elapsed time	5 min	10 min	15 min	20 min	25 min	30 min	40 min	50 min	60 min	90 min	120min
Value in ppb	988	1143	1150	1143	1157	1165	1177	1161	1134	1112	989

*Values are indicated in ppb (1ppb=0.001ppm). The dissolved saturation concentration (limit value) of hydrogen in water is 1600ppb. What this actual measurement indicates is that VITARAISER reacts with the water in the intestines and releases hydrogen almost to the limit, and a considerable amount of hydrogen from the intestinal wall dissolves in the blood and is absorbed into the body. In addition, there is no significant change in the amount of hydrogen released, and it can be recognized that this situation has continued for a long time.
